

Professional Development in Technology Education

Teknosofikum, is a course in Technology Education for higher education teachers in Denmark. Participants have the chance to share experiences, discuss and learn new perspectives on technology and teaching. It is a **unique collaboration** financed by Danish Ministry of Research and Education and brought forward by University of Copenhagen, Royal Danish Academy, Design School Kolding, and IT University of Copenhagen.

Teknosofikum follows a **practice-oriented approach**. This means you will get to concretely explore a range of relevant topics on how technology can affect your field of work and professional teaching practice while pursuing the following **learning outcomes**:

- Discuss digital pedagogies, learning theories, and teaching styles critically with peers
- Expand knowledge about educational technologies, tools, and platforms
- Develop skills to support students' learning processes
- Create a teaching plan you can use in your own teaching

*We are glad to invite you to take part in the forthcoming iteration of the Teknosofikum course!
Join this fall, 2023.*

You can choose between:

A. Hybrid format (40hrs)

B. Online format (25hrs)

Both formats have the same learning platform, content availability, and mode of learning based on self-study. In both formats you will be together with a cohort of other participants from different backgrounds and expertise, and you will have the chance to share and discuss content and pedagogical aspects in three different moments: (1) course kick-off meeting; (2) midway meeting; (3) closing round-up meeting.

For the hybrid format, the kick-off and closing meetings take place as full-day on-site workshops in Copenhagen, while for the online format, they are two-hours online meetings.

Participants completing the course will receive a **certificate**.

SIGNING UP DEADLINE: 11th of September

To register, send a mail to teknosofikum@itu.dk and let us know if you prefer Hybrid or Online format. Please check your availability with the dates on the following page.

What previous participants said about the course:

"Engaged facilitators, aesthetically and knowledge-appealing platform with solid content. Interesting cross-sector discussions."

"It was productive, as what I learned helped me to develop my teaching plan in an interactive platform with other colleagues."

"Both the workshops and online meeting were engaging. Good activities! I liked and appreciated the diversity of the groups."

"Very professional setup. Super interesting content - and if a topic was less interesting, I just chose another because there were so many good topics to choose from."

We look forward to meeting you!
